

Fire signs are used to advise the location of fire alarms and fire-fighting facilities.

Fire signs are rectangular in shape with a red background and white text and symbols.

This category includes our core range of fire signs, however we can also produce fire signs with custom messages upon request.

Our fire signs are made to the specifications of AS1319-1994 and are available in a variety of standard sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code. Other sizes are also available upon request, i.e. 900mm x 600mm.
