

Restricted area signs are used to indicate areas on your site which are not open to general personnel or visitors.

There is no Australian Standard for restricted area signs, however they are included due to their general nature and mass application.

This category includes our standard range of restricted area signs, however we can also produce signs with custom messages upon request.

Restricted area signs are available in a variety of regular sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code. Other sizes are also available upon request, i.e. 900mm x 600mm.
