

Swing stand signs are extremely versatile and are used predominantly for traffic management. The signs are not governed by any standard, however are loosely based on Australian Standards in some circumstances.

We have included swing stand signs due to their general nature and mass application.

This category includes our standard range of swing stand signs, however we can also produce signs with custom messages upon request.

Swing stand signs are manufactured in metal in two standard sizes - 600mm x 450mm and 900mm x 600mm. Other sizes are also available upon request, i.e. 600mm x 600mm.

As a standard, swing stand signs are available as Class 1 retroreflective however non-reflective options are available on request.

We have included both the sign and stand as a complete unit below, however stands and signs can also be sold separately.
