

Warning signs

Warning signs are used to indicate warning of a hazard or hazardous condition that is not likely to be life-threatening.

These signs are yellow in colour with black text and icons. All icons are housed within a black triangle.

Warning signs have been previously known as 'caution signs' but this terminology is no longer used by the Australian Standard. The terms 'warning' and 'caution' are now regarded as being interchangeable however.

This category contains our core range of warning signs, however we can also produce signs with your own custom message.

Our warning signs are made to the specifications of AS1319-1994 and are available in a variety of standard sizes. They can be manufactured on metal, polypropylene or corflute material, or can alternatively be supplied on self-adhesive vinyl labels. Aluminium signs are also available upon request.

Standard sizes and materials are listed in the table below each sign, along with the relevant part code. Other sizes are also available upon request, i.e. 600mm x 900mm.
